MAWSON ACQUIRES HIGH GRADE ALTO QUEMADO GOLD-COPPER PROJECT IN MINERAL-RICH SOUTHERN PERU

- **Alto Quemado is a significant new discovery in Peru**
- **Large Scale potential and although recently mined on a small scale, the project has never been drill tested**
- **Two styles of mineralization have been identified:**
 - **A high-grade near-term production gold target; and**
 - **a Large tonnage copper-gold porphyry target**

States Michael Hudson, Mawson President & CEO

"Alto Quemado is an exciting new gold and copper discovery in Peru with both short term and large scale potential. Recent small scale mining has exposed a network of high-grade gold structures beneath a weathered and depleted surface zone. The tenor of the mineralized structures that extend over 3km is demonstrated by Mawson's 15 check samples averaging 60g/t Au with grades ranging from 0.06g/t to 709g/t Au from underground workings. The scale of a strong IP chargeability anomaly beneath the leached porphyry and extending away under the high grade mineralized structures over 1.8km by 0.5km forms an impressive target. The Project has not been methodically explored by modern techniques and never drill tested. We plan an aggressive exploration program to test both targets styles" said Mr Hudson. "Mawson continues to review global multi-commodity exploration opportunities and now has a twofold strategy to explore this new gold discovery with significant potential while in parallel pursuing its European uranium strategy."

Mawson Press Release

●Mawson Resources holds significant uranium resources in the nuclear energy reliant countries of Sweden and Finland. As the European Union reduces its reliance on carbon-based energy sources, Mawson is well placed as the Company develops its exploration portfolio towards the sustainable production of uranium in the shortest possible time frame.

CEO in Video Interview**](#)

have seen the Management of Mawson make and I applaud this, as I expect the market will as well.

While the Company has a tremendously advanced Uranium portfolio, the market is not giving it the value it deserves. The shares have been basically trading for cash and no value has been given to its outstanding U portfolio in nuclear reliant Europe.

The European uranium story will provide a solid long term winner for investors **while this high grade (up to 709g/t!!! Au) project will provide the short to medium term focus.** Both Areva and Cameco diversified into gold in the 80's and Mawson has followed this business model.

Mawson, the mining house is developing along very nicely indeed.

"Mawson is very well placed as a European uranium explorer, with a project portfolio that includes both resources and high merit exploration projects across three countries. Combined with a strong technical team and adequate funding, we look forward to adding further value through discovery and acquisition during 2010."

--Michael Hudson, CEO, Mawson Resources
